SUMMARY

MCA student skilled in Java, Python, JavaScript, OOP, and Data Structures & Algorithms, with hands-on experience building AI-powered applications using Gemini API and MERN stack (React.js, Node.js, Express.js, MongoDB). Experienced in REST APIs, authentication, LLM-based features, and Generative AI technologies.

EDUCATION

Master of Computer Applications (MCA) — Jawaharlal Nehru University, New Delhi	2025 – 2027
CGPA: 7.54/9	
Bachelor of Computer Applications (BCA) — M.L.K.P.G. College, Balrampur	Sep. 2021 – May 2024
CGPA: 8.12/10	

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL
Frontend: HTML, CSS, React.js
Backend: Node.js, Express.js, REST APIs, JWT Authentication
Databases: MongoDB, MySQL
Tools & Technologies: Gemini API, Prompt Engineering, Git, GitHub, Command-Line Tools, VS Code, MongoDB Atlas, Postman
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EXPERIENCE

MIS Assistant People Action for National Integration (PANI)	July 2025 – October 2025
- Managed and validated project datasets using MS Excel and MIS tools to ensure data accuracy. - Generated reports and dashboards using Excel functions, Pivot Tables, and data analysis techniques. - Collaborated with teams for data collection, analysis, and reporting.	

PROJECTS

Gen-AI Interview Platform React.js, Node.js, Express.js, MongoDB, Gemini API, JWT	GitHub
- Designed a multi-step LLM pipeline (resume analysis → personalized question generation → feedback → preparation plan) using the Gemini API, chaining prompts so each stage's output conditions the next — an early agentic-style workflow rather than a single-shot prompt. - Implemented JWT auth, resume parsing, and REST APIs to serve dynamic, validated interview reports.	
Streamify – Real-Time Video Chat Application React.js, Node.js, Express.js, MongoDB, JWT, Stream SDK	GitHub
- Built a real-time chat and video calling application with secure JWT-based authentication. - Developed REST APIs and responsive user interfaces to support seamless real-time communication.	
TransitOps – Smart Transport Operations Platform React.js, Node.js, Express.js, MongoDB, JWT	GitHub
- Developed a full-stack fleet management platform to manage vehicles, drivers, trips, maintenance, and expenses. - Implemented JWT Authentication, Role-Based Access Control (RBAC), and business rule validation for secure operations. - Built REST APIs and interactive dashboards for fleet utilization, fuel tracking, and operational analytics.
